Profile

I design and build web and mobile applications with geolocation and subscription billing. I've integrated AI services into web applications and helped build conversational agents with Gemini.

Experience

Full Stack Developer

January 2025 to present

Follow LSN

- I design and implement geolocation, route visualization and trip tracking features. I develop the web app in React, the driver app in React Native and the backend services in Java with Spring Boot.
- I helped build conversational agents with Gemini to automate pickup coordination over WhatsApp.
- I integrated Stripe and Mercado Pago into the subscription module.
- I manage servers and deployment environments with Docker.

Full Stack Developer

February to August 2024

Itesa Innovation Hub

- Built web interfaces in React for applications that stored their data in MongoDB.
- Implemented APIs with Node.js and Express and integrated AI services into application backends.
- Helped plan features, tested changes and supported deployments.

Web Developer

July 2022 to January 2024

Freelance

- Advised clients on technology choices and worked with them to define each project's scope.
- Built custom websites and applications with React and Next.js. Implemented interfaces with Tailwind CSS and connected applications to external services through APIs.
- Maintained websites and applications after delivery.

QA and Technical Support

December 2020 to July 2022

Dubbz

- Performed functional tests and documented bugs for the development team.
- Tracked issues with international teams and handled technical support requests from users.
- Moderated community activity on the platform.

Technical skills

Web and mobile

React | Next.js | React Native | Tailwind CSS

Backend and data

Java | Spring Boot | Node.js | Express | MongoDB

AI and integrations

Gemini | conversational agents | Mercado Pago

Infrastructure

Docker
